<p>1 新发寄生虫病病原学、分子流行病学、群体遗传结构、基因分型、生物信息学分析、检测与监测关键技术研究 ● 从新发肠道原虫病的防控需求出发，建立自主知识产权的高通量、快速芯片检测新技术，首次报道江苏腹泻病人感染动物源安氏隐孢子虫，发现 A370 位点作为不同动物来源感染的分型依据；首次报道上海腹泻病人感染环孢子虫；获得江苏和上海“十二五”与“十三五”期间腹泻病人的新发肠道原虫谱，挖掘其具有地区和年龄的显著性差异，呈增加变化，提供公共卫生健康新的关注点，为安氏隐孢子虫在人间传播的新优势虫种共患跨种病传播中提供有力的证据。</p> <p>2 重要寄生虫病感染与免疫研究</p>	

- 从重点寄生虫防治的机制探讨出发，建立小鼠免疫细胞/人滋养细胞体外培养的技术平台和日本血吸虫为代表的蠕虫感染模型，从表观转录组的角度，参与完成病原体入侵宿主时 TET2 针对免疫应答的机制；从自噬的角度，参与完成 IL4 诱导 Th2 细胞转化，促进 B 细胞产生 IgE，诱导哮喘发生；从微生态角度，首次报道急性血吸虫病人肠道细菌感染谱改变，识别其肠道菌群肠型的独特性改变，认为 TM7 细菌可能影响血吸虫病患者疾病进程的改变，为后续探讨日本血吸虫病的免疫病理认识提供新的视角。

Research Interest

1. Research on Key Technologies of etiology, molecular epidemiology, population genetic structure, genotyping, bioinformatics analysis, detection and monitoring of emerging parasitic diseases

Based on the prevention and control needs of new intestinal protozoan diseases, a new high-throughput and rapid chip detection technology with independent intellectual property rights was established. It was reported for the first time that Jiangsu diarrhea patients were infected with Cryptosporidium anserini of animal origin, and A³⁷⁰ locus was found as the basis for typing infections from different animal sources; It was first reported that diarrhea patients in Shanghai were infected with cyclosporidium; Obtain the new intestinal protozoa spectrum of diarrhea patients in Jiangsu and Shanghai during the "12th Five Year Plan" and "13th five year plan", excavate the significant differences between regions and ages, and show increasing changes, provide a new focus of public health, and provide strong evidence for the spread of Cryptosporidium andersoni in the new dominant species of CO infection and cross species disease spread among humans.

2. Study on infection and immunity of important parasitic diseases

Based on studying the mechanism of key parasite control, establish a technical platform for in vitro culture of mouse immune cells / human trophoblasts and a worm infection model represented by Schistosoma japonicum, and participate in the mechanism of tet2's immune response when pathogens invade the host from the perspective of apparent transcriptome; From the perspective of autophagy, participate in the transformation of Th2 cells induced by IL4, promote the production of IgE by B cells, and induce asthma; From the perspective of microecology, it is the first time to report the changes of intestinal bacterial infection spectrum in patients with acute schistosomiasis, identify the unique changes of intestinal flora and intestinal type, and believe that TM7 bacteria may affect the changes of disease process in patients with schistosomiasis, providing a new perspective for the follow-up study of immunopathological recognition of schistosomiasis.
